1 PyGame

http://openbookproject.net/thinkcs/python/english3e/pygame.html

- third-party package that is used in Game development using Python
- must install using pip https://www.pygame.org/download.shtml
- \$ pip install pygame
 - see documentation: http://openbookproject.net/thinkcs/python/english3e/pygame.html
 - see demos/pygamedemos folder within the repository to run the provided source codes

```
[1]: %%bash
# install pygame
pip install pygame
```

```
Requirement already satisfied: pygame in /Users/rbasnet/miniconda3/lib/python3.7/site-packages (1.9.4)
```

2 The game loop

In every game, in the setup section we'll create a window, load and prepare some content, and then enter the game loop. The game loop continuously does four main things:

- it polls for events i.e. asks the system whether events have occurred and responds appropriately,
- it updates whatever internal data structures or objects need changing,
- it draws the current state of the game into a (non-visible) surface,
- it puts the just-drawn surface on display.

```
def main():
    """ Set up the game and run the main game loop """
    pygame.init()  # Prepare the pygame module for use
    surface_sz = 480  # Desired physical surface size, in pixels.

# Create surface of (width, height), and its window.
    main_surface = pygame.display.set_mode((surface_sz, surface_sz))
```

```
# Set up some data to describe a small rectangle and its color
    small_rect = (300, 200, 150, 90)
    some_color = (255, 0, 0) # A color is a mix of (Red, Green, Blue)
    while True:
        ev = pygame.event.poll()
                                  # Look for any event
        if ev.type == pygame.QUIT: # Window close button clicked?
           break
                                   # ... leave game loop
        # Update your game objects and data structures here...
        # We draw everything from scratch on each frame.
        # So first fill everything with the background color
       main_surface.fill((0, 200, 255))
        # Overpaint a smaller rectangle on the main surface
       main_surface.fill(some_color, small_rect)
        # Now the surface is ready, tell pygame to display it!
       pygame.display.flip()
                    # Once we leave the loop, close the window.
    pygame.quit()
main()
```

pygame 1.9.4 Hello from the pygame community. https://www.pygame.org/contribute.html

```
import pygame
import time

def main():

    pygame.init()  # Prepare the PyGame module for use
    main_surface = pygame.display.set_mode((480, 240))

# Load an image to draw. Substitute your own.
    # PyGame handles gif, jpg, png, etc. image types.
    ball = pygame.image.load("pygame/ball.png")
    ball = pygame.transform.scale(ball, [20, 20])
    # Create a font for rendering text
    my_font = pygame.font.SysFont("Courier", 16)

frame_count = 0
    frame_rate = 0
    t0 = time.clock()
```

```
while True:
        # Look for an event from keyboard, mouse, joystick, etc.
        ev = pygame.event.poll()
                                     # Window close button clicked?
        if ev.type == pygame.QUIT:
            break
                                     # Leave game loop
        # Do other bits of logic for the game here
        frame count += 1
        if frame count % 500 == 0:
            t1 = time.clock()
            frame_rate = 500 / (t1-t0)
            t0 = t1
        # Completely redraw the surface, starting with background
        main_surface.fill((0, 200, 255))
        # Put a red rectangle somewhere on the surface
        main_surface.fill((255,0,0), (300, 100, 150, 90))
        # Copy our image to the surface, at this (x,y) posn
        main_surface.blit(ball, (100, 120))
        # Make a new surface with an image of the text
        the_text = my_font.render("Frame = {0}, rate = {1:.2f} fps"
                  .format(frame count, frame rate), True, (0,0,0))
        # Copy the text surface to the main surface
        main_surface.blit(the_text, (10, 10))
        # Now that everything is drawn, put it on display!
        pygame.display.flip()
    pygame.quit()
main()
```

pygame 1.9.4
